STEPPING UP SAFETY

QUICKFLASH LED

Paving the way for rescue workers to support them in helping more quickly.

Before they are able to help, they have to secure the scene of the accident first, in order to protect all people involved as well as themselves. To make this happen as quickly as possible, Nissen has developed the QuickFlash LED - the ideal combination of a folding beacon and a rapid securing lamp.

Simply practical: Ready for use in no time

In practical applications, functionality has top priority. The QuickFlash LED is set up in a matter of seconds. Its rubber foot and compact size provide reliable stability even when there's a strong wind. In practice, this means: unfold it, set it up, switch it on - done.

Highly efficient: Only one LED

Thanks to the innovative lens technology, the lamp only requires one LED. This saves energy and allows for an operating time of up to 150 hours. The automatic day/night adjustment feature ensures optimum visibility round the clock. Furthermore, an optional number of lamps can be switched in series without any cables. The lamp is BAST-tested (by the Federal Road Research Institute), complying with TL warning lights.

Unmissable: Retroreflective high-tech foil

The micropismatic highly reflective foil of the RA 2 C, which impresses by its optimum reflection and durability, provides for additional safety.

Good ideas: We know what's important

Apart from its high-level functionality, the QuickFlash LED will impress you by its well-thought out features for easy handling. These for instance include space-saving storage, thanks to the folding technique, and ergonomically designed grips. Furthermore, the magnet integrated into the luminaire head prevents the closed system from unintentionally unfolding.

Stackable so as to save space (side view)

Stackable to save space (front view)

Recessed grip

Lamp with only one LED

Operating time of up to 150 hours

Retroreflective foil of the RA2 C type

Any number of lamps can be connected in series as key-light

Low weight: only 5.5 kg

Ready for use in a matter of seconds

Art. Nr.: 129 103-002-100
